

BMS Secure-IT

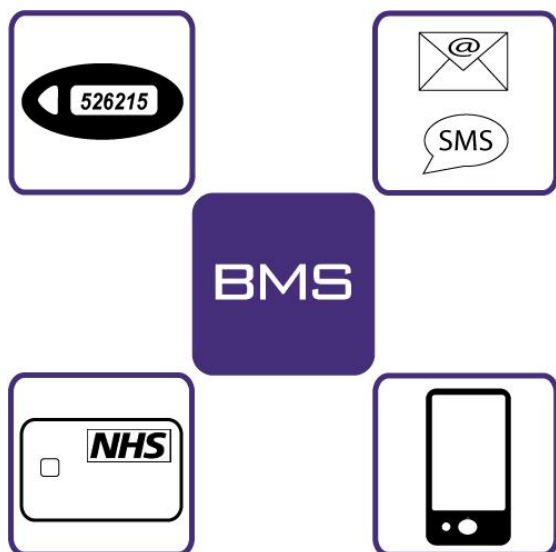

The NHS 2-Factor Authentication Solution

The BMS Mobile Working Solution – Secure-IT - offers strong 2-factor authentication that enables NHS staff to securely access data from wherever they are working. The BMS solution offers a wide range of authentication tokens: BMS Hard Token, NHS Smartcard and BMS Soft Token (Mobile, SMS or Email).

“Using secure remote access technology is intrinsic to the effectiveness of our mobile clinicians, who are mainly District Nurses and Health Visitors. Using the BMS Mobile Working Solution allows them maximum mobility and an easier way of working that suits their role and their patients.” said Stuart Webster, Architectural Manager at NHS Central Eastern CSU.

As the NHS evolves, the need for IT to provide innovative solutions for agile working continues to grow. Furthermore, different users have different access requirements, so the BMS Mobile Working Solution offers complete flexibility.

As well as the traditional “hard token”, NHS organisations can use Secure-IT to combine several authentication methods within a single solution:

Features

- Multiple authentication methods: Hard, Soft and Smartcard
- AD integration
- User self-service portal
- Shared tokens
- Secure-IT supports all major platforms (Cisco, VMware, Citrix, Juniper etc)
- Mobile token supports multiple handsets:

Benefits

- Solution designed specifically for the NHS, proven technology
- Flexible solution to cater for all users with different authentication needs
- Low cost of adoption – instant cost & efficiency savings
- Minimal support and management required
- NHS Smartcard users can leverage more benefit from their card
- Easy to install and deploy - users can be set up within minutes
